Professional Summary

Software Engineer focused on backend development with Go and PostgreSQL. Experienced building REST APIs, data pipelines, web applications, and payment-oriented systems through collaborative software engineering projects. Built systems spanning job aggregation, real-time social networking, and Lightning Network payment workflows.

Skills

- **Languages:** Go, JavaScript, SQL
- **Frameworks & Libraries:** Fiber, GORM, React, Next.js
- **Tools:** PostgreSQL, SQLite, Git, GitHub, Docker, Linux

Projects

[Opportunity Radar](#) - Job Scraper & Recommendation System

Technology: Go, PostgreSQL, HTML Templates, Resend API

- Built a job aggregation platform that consolidates listings from multiple sources, helping users discover relevant opportunities through personalized email recommendations.
- Developed a data processing pipeline that normalizes inconsistent job data into a unified PostgreSQL schema and ranks opportunities based on user profiles.
- Delivered automated top-10 job recommendations through scheduled processing, with duplicate detection to improve recommendation quality and prevent repeated listings.

[PamojaBuild](#) - Bitcoin-Powered Community Fundraising Platform

Technology: Go, PostgreSQL, HTML, CSS, JavaScript

- Collaborate in a 5-developer team to build a platform for community fundraising, project coordination, and transparent fund management.
- Developed Lightning Network payment workflows with LND, implementing idempotent processing to prevent duplicate payment and payout events.
- Designed authorization controls and a 3-of-5 multisignature trustee approval process to improve security and accountability for fund releases.

Experience

Zone 01 Kisumu - Software Development Apprentice - *January 2026 - Present*

- Contribute to MIA, a micro-influencer marketing platform, integrating Meta accounts and campaign tracking with the Meta Graph API and AWS KMS for secure token management.
- Contribute to Go SDKs providing unified interfaces for messaging and Kenyan payment APIs, and to a data platform focused on job aggregation and labor market insights.

JaGedo - Frontend Developer (Contract) - *June 2024 - August 2024*

- Built responsive dashboard interfaces and integrated backend APIs using Next.js.

Education

Multimedia University of Kenya - Bachelor of Science (Computer Science) | Second Class Honours (Upper) - *September 2019 - October 2023*
